2. EUMETSAT surface soil moisture

- ERS-1: 1991 - 1996
- ERS-2: 1995 – 2009...

- Resolution 50 / (25) km
- Daily global coverage: ~ 40%

- MetOp: 2006 - 2020

- Resolution 25 km
- Daily global coverage: ~ 80%

2. EUMETSAT surface soil moisture

METOP/ASCAT: C-band radar
(weather & sun radiation independent)

Backscatter influenced by :

- topography (diffuse/specular scattering)
- vegetation (volume scattering)
- water (specular scattering)

Backscattering from the upper few centimeters

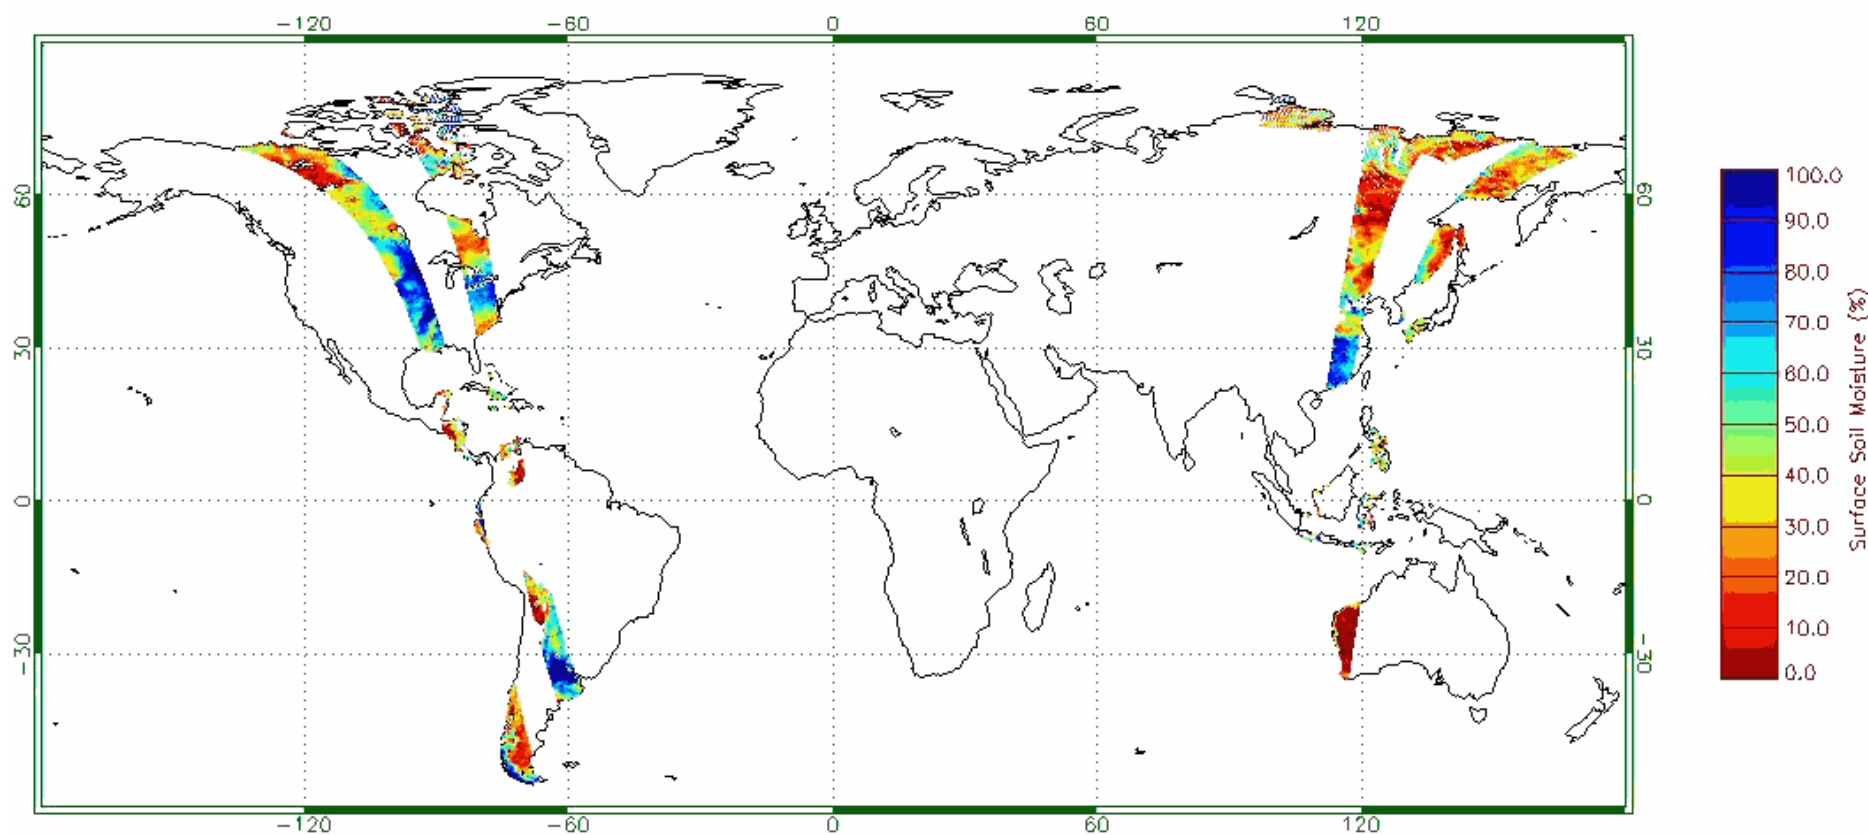

No soil moisture detection: rain forest, desert, snow, mountains

4. Applications

Soil moisture for Water Resource Management

- **Connect with hydrological models:** input data over the upper layer (1 meter)

4. Applications

Soil moisture for Water Resource Management

- **Model approach and Empirical relation with river discharge (West Africa)**

1. ERS data contains valuable information on soil moisture, and can improve our knowledge of hydrological states in West Africa.

2. For a simple impulse response model, ERS-soil moisture estimates improve runoff predictions in West Africa.

4. Applications

Soil moisture for Water Resource Management

- **In The Netherlands**

Water boards:

- temporal resolution: OK
- spatial resolution: not OK

How to improve spatial resolution?

4. Applications

Soil moisture for Water Resource Management

- **In The Netherlands**

How to improve spatial resolution? By:

1. Combining ASCAT soil moisture with ASAR -> 1 km product
2. Redistribute soil moisture, index based: by means of relationships with: e.g. altitude (AHN2), evaporation, temperature

Conclusions

- Soil moisture products guaranteed for coming 15 years, with MetOp
- (Multi) daily soil moisture products available:
 - Daily profile soil moisture, fixed grid
 - Daily anomalous profile soil moisture, fixed grid
 - Daily profile soil moisture error, fixed grid
 - Surface soil moisture, fixed grid
- Many possible fields that can benefit from direct soil moisture observations:
 - water management & drought monitoring
 - crop yield forecast & early warnings
 - meteorology, weather forecasting
 - ..
